

## Laminates

This solenoid has a Tshaped laminated design plunger and laminated steel frame. It has the unique ability to hold an exceptionally heavy load with a minium of humming or vibration.
To minimize the humming or chattering of most AC solenoids, the contact surfaces of the laminated frame and plunger are machined to provide a smooth and flush contact surface. Dormeyer Super-T Laminates are products of years of engineering, research and manufacturing experience.

Available in various frame sizes to meet most requirements for medium life as well as in a variety of plunger and coil arrangements, they are readily suited for most high force AC applications. These include appliances, business machines and vending machines. The Super-T Series Laminates are tooled with provisions to modify the basic design and tooling to fit high volume applications at the lowest possible unit cost. Super-T Laminates can be supplied with fully encapsulated coils at the same price as taped coils.

- Low cost, high volume products

■ Strokes to 1.25 inches ( 0.32 mm)

■ Custom design work is our strength

## Applications

- Commercial equipment
- Industrial doors
- Machine tools

All catalog products manufactured after April 1, 2006 are RoHS Compliant

## Principle of Operation

Laminate solenoids consist of a laminated steel frame, a coil, and a movable plunger in the center of the coil. When the coil is energized the plunger is pulled into the coil.

## Selection Overview

Use the selection chart on the following page to determine which model offers the desired performance and mechanical specifications. Refer to the individual frame size specification pages for complete performance and mechanical data.
Even with our many standard solenoid designs, our customers often require a product with unique features or performance capabilities. If you don't find what you're looking for in the catalog, please give us a call and talk to one of our application engineers.

## Dormeyer ${ }^{\circledR}$ AC Laminates

## Design Considerations

## Life

When selecting an open frame solenoid, as with any other solenoid style, it is important to consider the effects of heat, since an increase in coil temperature reduces the work output and the life of the unit. Standard life is 50,000 to 100,000 operations. Consult the factory for longer life of 500,000 or more cycles, and other special requirements.

## Duty Cycle

Duty cycle is determined by solenoid ON time/(ON + OFF time).
For example: a solenoid is actuated for 30 seconds, then off for 90 seconds. 30 sec ON / 30 Sec ON +90 sec $O F F)=30 / 120=1 / 4$ or $25 \%$ duty cycle.

## Performance Curves

The Force/Stroke
performance curves in this section serve as guides to determine the solenoid size needed to produce a desired force at a given stroke, duty cycle, and power source. All Force/Stroke curves are performed under standard test conditions: ambient temperature of $20^{\circ} \mathrm{C}$. A design safety factor of 1.3 to 1.5 is recommended. For example, when a 4.5 lb pull force is required, select a model with a safety factor of 1.3 to 1.5 times ( 5.8 to 6.7 lb ).

## NOTES:

1. All data is typical.
2. Pull values indicated are without plunger weight. Add or subtract 0.11 lbs . $(0.5 \mathrm{~N})$ to obtain net pull when operated with or against gravity. Force data: $\pm 10 \%$. Quiet seal pull: $4.5 \mathrm{oz} .(1.2 \mathrm{~N})$ at rated voltage.
3. All data reflects operation with no heatsink.
4. Other coil terminations available.
5. All specifications subject to change without notice.

## How to Order

Select the part number from the table provided. (For example, to order a continuous duty cycle unit rated at 120 VAC, specify $1000-\mathrm{M}-1$.
Please see www.ledex.com (click on Stock Products tab) for our list of stock products available through our distributors.
